

The Algae Store

About us:

The Algae Store is India's first B2B platform for macro algae (seaweed), connecting suppliers and buyers across the entire value chain located in various countries.

We provide market access for seaweed cultivators and seaweed-product manufacturers, as well as simplify procurement for industries.

We provide applications for sectors such as food, pharma, cosmetics, material science and agriculture, thus improving transparency in the supply chain.

Products - Biomass

Kappaphycus Alvarezii

Kappaphycus alvarezii, a red seaweed, is harvested for carrageenan, a versatile polysaccharide used as a thickener, stabilizer, and gelling agent. It is widely applied in food products like dairy, meat, and plant-based alternatives, as well as in cosmetics and pharmaceuticals, enhancing texture, stability, and shelf life across various industries.

Available in: Dry, chopped, shredded

Ulva Lactuca

Ulva, a green seaweed, is rich in nutrients and used extensively in agriculture as a biofertilizer, boosting soil health and crop productivity. It is also incorporated into animal feed, bioplastics, and cosmetics, with growing interest in its bioactive compounds for pharmaceutical use.

Available in: Dry, chopped, shredded

Sargassum

Sargassum, a brown seaweed, is valued for its bioactive compounds like alginates and fucoidan. It is used in agriculture as a biofertilizer, in animal feed, and in wastewater treatment. Its extracts are gaining popularity in cosmetics and pharmaceuticals for their antioxidant and antimicrobial properties.

Available in: Fresh, Dry, Pulverised, Chopped

Products - Biomass

Geledium

Gelidium, a red seaweed, is a key source of high-quality agar, known for its purity and strength. It is used primarily in biotechnology as a culture medium, as well as in food and pharmaceuticals for its superior gelling properties.

Available in: Dry, chopped, shredded

Gracilaria

Gracilaria, a red seaweed, is primarily used for producing high-quality agar, a gelling agent essential in the food, biotechnology, and pharmaceutical industries. It plays a significant role in microbiology as a culture medium and is also valued for its thickening properties in various applications.

Available in: Dry, chopped, shredded

Products - Sap

Sap is a liquid extract obtained from various seaweeds that acts as a biostimulant to boost the growth of crops. Sap is rich in nutrients and bioactive compounds, it is used as a biofertilizer to improve soil health and promote plant growth. It also has applications in animal feed and sustainable agriculture. Liquid sap available for *Kappaphycus alvarezii* and *Sargassum*.

Products -Hydrocolloids

Semi-refined Carrageenan

Semi-refined carrageenan is an intermediate form of carrageenan derived from red seaweed, such as Kappaphycus, used as a thickening and gelling agent in the food industry. It is particularly effective in dairy products and plant-based alternatives, offering stability and texture enhancement.

Refined Carrageenan

Refined carrageenan is a highly purified polysaccharide derived from red seaweeds, such as Kappaphycus. Known for its superior gelling properties, it is widely used in food, cosmetics, and pharmaceuticals for stabilization and thickening.

Alginate

Alginate is a polysaccharide extracted from brown seaweeds like Sargassum. It is valued for its thickening and gelling properties, commonly used in the food industry, pharmaceuticals, and even textile printing. Alginate is also applied in wound care products for its moisture retention capabilities.

Agar

Agar, extracted from red seaweeds like Gelidium and Gracilaria, is widely used as a gelling agent in food, biotechnology, and pharmaceuticals. It serves as a culture medium in microbiology and is valued for its high purity and firm texture in applications.

Ulvan

Ulvan is a sulfated polysaccharide derived from green seaweeds like Ulva. It is known for its bioactive properties and is used in agriculture, pharmaceuticals, and cosmetics. Ulvan has shown potential in boosting plant immunity and has applications in bioplastics.
